Content Intelligence	67
Personalization Readiness	100

Open Graph incomplete — missing: og:title, og:description, og:image, og:url

CRITICAL

OG tags control appearance when shared on social media.

Fix: Add og:title, og:description, og:image, og:url and og:type.

SUGGESTED FIX

```
<meta property="og:title" content="Your Page Title">
<meta property="og:description" content="A concise summary of this page.">
<meta property="og:image" content="https://example.com/og-image.jpg">
<meta property="og:url" content="https://example.com/this-page">
<meta property="og:type" content="website">
```

Meta description too short

WARNING

43 chars (optimal 120–160).

IntSphere - Expert Oracle Cloud Consulting.

Fix: Expand the description to 120–160 characters.

Missing canonical URL

WARNING

No rel="canonical" found — can cause duplicate-content issues.

Fix: Add <link rel="canonical" href="..."> pointing to the preferred URL.

SUGGESTED FIX

```
<link rel="canonical" href="https://example.com/this-page">
```

No structured data (JSON-LD)

WARNING

Schema.org markup helps search engines understand your content and enables rich results.

Fix: Add JSON-LD for Article, Product, Organization, FAQ or other relevant types.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Your Company",
  "url": "https://example.com",
  "logo": "https://example.com/logo.png",
  "sameAs": ["https://twitter.com/yourcompany", "https://linkedin.com/company/yourcompany"]
}
</script>
```

No Twitter/X Card meta tag

INFO

Adds a visual card when your page is shared on Twitter/X.

Fix: Add <meta name="twitter:card" content="summary_large_image">.

SUGGESTED FIX

```
<meta name="twitter:card" content="summary_large_image">
```

[INFO](#)

Preview image dimensions not declared

Add og:image:width/og:image:height so image size (and Discover eligibility) can be verified.

Fix: Add `<meta property="og:image:width" content="1200">` alongside og:image.

SUGGESTED FIX

```
<meta property="og:image:width" content="1200">
<meta property="og:image:height" content="630">
```

[PASS](#)

Title is well-optimised

"IntSphere - Transform Your Oracle Cloud Experience" (50 chars)

IntSphere - Transform Your Oracle Cloud Experience

[PASS](#)

Page is indexable

robots: index, follow

[PASS](#)

Single H1 heading

"Oracle Cloud Consulting & Implementation Experts"

Oracle Cloud Consulting & Implementation Experts

[PASS](#)

Heading hierarchy is correct

22 headings in proper order.

[PASS](#)

All 2 images have alt text

Good for both SEO and accessibility.

[PASS](#)

Language attribute set

lang="en"

en

[PASS](#)

Viewport meta tag present

width=device-width, initial-scale=1.0

width=device-width, initial-scale=1.0

[PASS](#)

Large image previews are not blocked

No robots directive prevents Google Discover from showing a large image preview.

No structured data found

CRITICAL

Generative AI engines rely heavily on Schema.org markup to extract factual information. Without it, your content is harder for AI to cite accurately.

Fix: Add JSON-LD for at minimum: Organization, WebPage or Article.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Your Company",
  "url": "https://example.com",
  "logo": "https://example.com/logo.png",
  "sameAs": ["https://twitter.com/yourcompany", "https://linkedin.com/company/yourcompany"]
}
</script>
```

Chunk Quality: 9% of sections are well-sized, self-contained chunks

CRITICAL

Sections between headings ideally run 30–500 words — long enough to stand alone, short enough for an AI engine to extract as one coherent chunk. 10 sections too short, 0 too long.

Fix: Split very long sections under additional subheadings, and expand very short ones with enough context to stand alone.

Question Coverage: 0 distinct question types addressed

CRITICAL

AI engines field a range of query phrasings (what/how/why/when/where/who/which) about a topic. Covering a spread of question types — not just one — raises the odds this page is the one cited, regardless of how the question is phrased.

Fix: Add headings covering other likely question types (e.g. "Why does X matter?", "When should you use X?").

No FAQPage schema

WARNING

FAQ schema surfaces question-and-answer content directly in AI-generated answers and Google FAQ rich results.

Fix: Identify the most common questions about your topic and mark them up with FAQPage schema.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "FAQPage",
  "mainEntity": [
    {
      "@type": "Question",
      "name": "Your frequently asked question?",
      "acceptedAnswer": { "@type": "Answer", "text": "The answer to the question." }
    }
  ]
}
</script>
```

No Article/BlogPosting schema

WARNING

Article schema tells AI engines who wrote the content, when it was published, and what it covers — key E-E-A-T signals.

Fix: Wrap editorial content in Article, BlogPosting or NewsArticle schema.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Article",
  "headline": "Your Article Title",
  "image": "https://example.com/article-image.jpg",
  "datePublished": "2026-07-27",
  "dateModified": "2026-07-27",
  "author": { "@type": "Person", "name": "Author Name" }
}
</script>
```

No author information found

WARNING

AI engines use author data to assess credibility (E-E-A-T). Missing authorship signals reduces the chance of AI citation.

Fix: Add author information via Article schema (with sameAs linking to a Person schema) and/or a byline on the page.

SUGGESTED FIX

```
<meta name="author" content="Author Name">
```

No Organization schema

WARNING

Organization schema establishes your entity in the Knowledge Graph — crucial for AI engines to attribute content to a verified source.

Fix: Add an Organization schema to your site-wide layout including name, url, logo and sameAs links to social profiles.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Your Company",
  "url": "https://example.com",
  "logo": "https://example.com/logo.png",
  "sameAs": ["https://twitter.com/yourcompany", "https://linkedin.com/company/yourcompany"]
}
</script>
```

No publication date signals

WARNING

AI engines factor content freshness into their answers. Without date signals, your content may be treated as undated.

Fix: Add datePublished and dateModified to your Article schema and/or a <time datetime="..."> element.

SUGGESTED FIX

```
<time datetime="2026-07-27">27 July 2026</time>
```

Citation Readiness: 64/100

WARNING

Rolls up the dedicated AI Citation Readiness check (content depth, structured data, author/date signals, extractable formatting) into a single GEO parameter.

Fix: Run the AI Citation Readiness tool on this page for the full per-signal breakdown behind this score.

No BreadcrumbList schema

[INFO](#)

Breadcrumbs help AI engines understand your site hierarchy and page context.

Fix: Add BreadcrumbList schema to every page that sits below the homepage.

SUGGESTED FIX

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "itemListElement": [
    { "@type": "ListItem", "position": 1, "name": "Home", "item": "https://example.com" },
    { "@type": "ListItem", "position": 2, "name": "This Page", "item": "https://example.com/this-page" }
  ]
}
</script>
```

No outbound links to external sources

[INFO](#)

Citing authoritative external sources signals factual depth — a key trust signal for AI engines (E-E-A-T).

Fix: Link to reputable sources (Wikipedia, academic papers, official docs) to back up your claims.

1 question-style heading found

[PASS](#)

Question headings are a strong GEO signal for AI citation.

Direct Answer Coverage: 100% of question headings open with a concise answer

[PASS](#)

Checks whether the content right after each question-style heading opens with a short, direct answer (≤30 words) rather than a long wind-up — the format AI engines most readily lift into a direct answer.

1 of 1 question headings

Entity Coverage (approximate): 72 distinct named terms, ~31.3 per 100 words

[PASS](#)

Approximate — counts proper nouns (capitalised names) as a proxy for named entities (people, organisations, places, products), not true named-entity recognition. AI engines use entity density to gauge how concretely a page is grounded in real, citable subjects.

Oracle, Cloud, Specialists, Consulting, Implementation, Experts, PaaS, HCM

Context Completeness (approximate): 0% of paragraphs open with an unresolved reference

[PASS](#)

Approximate — flags paragraphs starting with a pronoun ("It", "This", "They"...) that depends on a previous sentence for meaning. This is a rough proxy, not real coreference resolution: if an AI engine extracts this paragraph in isolation, that reference would be meaningless without the missing context.

0 of 20 paragraphs

Topic Focus: 70% of paragraphs reference the page's core topic

[PASS](#)

Checks how often key terms from the H1 ("Oracle Cloud Consulting & Implementation Experts") recur through the body. Low recurrence suggests the page wanders across unrelated topics, which weakens the single clear subject AI engines look for when deciding what a page is "about".

Information Density: 51% unique vocabulary, 0.4 data points per 100 words

[PASS](#)

Estimated from vocabulary variety (unique words ÷ total words) and how often concrete numbers or statistics appear — low variety and few concrete data points often indicate repetitive, marketing-fluff content that AI engines are less likely to treat as a substantive source.

No <main> landmark

CRITICAL

The <main> element is missing — it defines the primary content region for browsers, search engines, and assistive technology.

Fix: Wrap your primary page content in a single <main> element.

SUGGESTED FIX

```
<main>
  <!-- primary page content -->
</main>
```

Heavy use of <div> with few semantic elements

WARNING

127 <div> elements but only 8 semantic elements — the page may have poor structural semantics.

Fix: Replace layout <div>s with appropriate semantic elements where possible.

63 /<i> elements found

INFO

Prefer (importance) and (emphasis) over presentational /<i>.

Fix: Replace with and <i> with for semantic meaning.

SUGGESTED FIX

```
<strong>important text</strong> instead of <b>, <em>emphasised text</em> instead of <i>
```

<header> landmark present

PASS

Site banner is semantically marked.

<nav> landmark present

PASS

Navigation is semantically marked.

<footer> landmark present

PASS

Footer is semantically marked.

No deprecated HTML elements

PASS

No obsolete presentational tags found.

List elements used (4)

PASS

Ordered and unordered lists are in use — good semantic practice.

5 form inputs without accessible label

CRITICAL

Screen reader users cannot identify unlabelled form fields.

Fix: Associate every input with a `<label for="id">` or add an `aria-label` attribute.

SUGGESTED FIX

```
<label for="email">Email</label>
<input id="email" type="email" name="email">
```

1 button without accessible text

CRITICAL

Buttons without text or `aria-label` are invisible to screen readers.

Fix: Add visible text content, `aria-label`, or `title` to every `<button>`.

SUGGESTED FIX

```
<button aria-label="Close dialog"><svg aria-hidden="true">...</svg></button>
```

No skip navigation link

WARNING

Keyboard and screen reader users must tab through all navigation items on every page without a skip link.

Fix: Add a "Skip to main content" link as the first element in the body.

SUGGESTED FIX

```
<a href="#main" class="skip-link">Skip to main content</a>
```

Page language declared: `lang="en"`

PASS

Screen readers can select the correct voice.

All images have alt attribute

PASS

2 images — 0 decorative (empty alt), rest have descriptions.

No vague link text detected

PASS

Links appear to use descriptive text.

60 keyboard-focusable elements

PASS

Keyboard navigable interactive elements detected.

No Content-Security-Policy header

WARNING

CSP prevents XSS attacks by controlling which resources the browser is allowed to load.

Fix: Add a Content-Security-Policy response header. Start with a report-only policy to tune it.

SUGGESTED FIX

```
Content-Security-Policy: default-src 'self'; script-src 'self'
```

No clickjacking protection

WARNING

Without X-Frame-Options or CSP frame-ancestors, the page can be embedded in an iframe for clickjacking attacks.

Fix: Add X-Frame-Options: DENY (or SAMEORIGIN), or set CSP frame-ancestors.

SUGGESTED FIX

```
X-Frame-Options: DENY
```

No Strict-Transport-Security (HSTS) header

WARNING

HSTS forces browsers to always use HTTPS, preventing downgrade attacks.

Fix: Add Strict-Transport-Security: max-age=31536000; includeSubDomains

SUGGESTED FIX

```
Strict-Transport-Security: max-age=31536000; includeSubDomains
```

No X-Content-Type-Options header

WARNING

Without this header, browsers may MIME-sniff responses and execute malicious scripts.

Fix: Add X-Content-Type-Options: nosniff to all responses.

SUGGESTED FIX

```
X-Content-Type-Options: nosniff
```

9 JavaScript console errors

WARNING

Failed to load resource: net::ERR_FAILED | Failed to load resource: net::ERR_FAILED | Failed to load resource: net::ERR_FAILED

Fix: Fix JavaScript errors — they can break functionality and signal poor code quality.

27 inline event handlers

INFO

Inline event handlers (onclick="...") violate CSP and are a security risk.

Fix: Move event handlers to external JavaScript files using addEventListener.

SUGGESTED FIX

```
element.addEventListener('click', handleClick); // instead of onclick="..."
```

Page served over HTTPS

PASS

Encrypted, secure connection.

Charset declared

PASS

charset="UTF-8"

UTF-8

Viewport meta tag set

PASS

width=device-width, initial-scale=1.0

```
width=device-width, initial-scale=1.0
```

HTML5 DOCTYPE declared

PASS

Browser renders in standards mode.

No deprecated HTML elements

PASS

All elements are valid HTML5.

No render-blocking scripts in <head>

PASS

Scripts are loaded asynchronously or deferred.

Cache-Control header present

PASS

max-age=600

Flesch Reading Ease: 11/100 — Very difficult to read

CRITICAL

Estimated from average sentence length and syllables per word. Higher scores are easier to read.

Fix: Shorten sentences and prefer simpler words to make the content easier to read.

EXAMPLE SENTENCES

"View Accelerators RecForge Payroll reconciliation accelerator — automatically compares legacy payroll data against Oracle Fusion HCM Payroll and highlights discrepancies instantly."

"Outcome-Driven Delivery We focus on reducing failures, improving performance, and accelerating delivery timelines."

Gunning Fog Index: 21 — requires an advanced reading level

CRITICAL

Approximates the years of formal education needed to understand the text on first read, based on sentence length and complex-word density.

Fix: Reduce reliance on long, multi-syllable words and dense sentences.

EXAMPLE SENTENCES

"Outcome-Driven Delivery We focus on reducing failures, improving performance, and accelerating delivery timelines."

"Services What we do Consulting Services End-to-end from architecture & strategy through implementation, migration, managed services, and training."

Average sentence length: 22.0 words

WARNING

Long sentences are harder to parse for both readers and AI summarisers.

Fix: Break long sentences into shorter, single-idea sentences.

EXAMPLE SENTENCES

"Explore AI Solutions Book a Demo AI-Based Analysis for VBCS Analyze VBCS Application in Plain English Error Analysis & Insights Multi-LLM root cause analysis Integration Flow Analy... (62 words)"

"View Accelerators Methodology How we work The Harbor Approach Our signature ERP implementation methodology — a phased, narrative-driven framework that navigates every enterprise fr... (34 words)"

Passive voice in ~0% of sentences

PASS

Writing is predominantly active voice.

0 of 22 sentences

No testimonials/social-proof section detected

INFO

Not every page needs this — but on landing/product pages, testimonials are a strong personalization lever.

No news/blog content detected

INFO

Not applicable to all page types.

Hero section identified

PASS

Matched by class/id naming convention (e.g. "hero", "banner").

5 call-to-actions identified

PASS

Examples: "Contact Us", "Explore Services", "Explore AI Solutions", "Book a Demo", "Send Message"

Product/offer listings detected

PASS

Candidate for audience-specific product or offer recommendations.
